

Launch a New Application on Cloud Server

In this KB

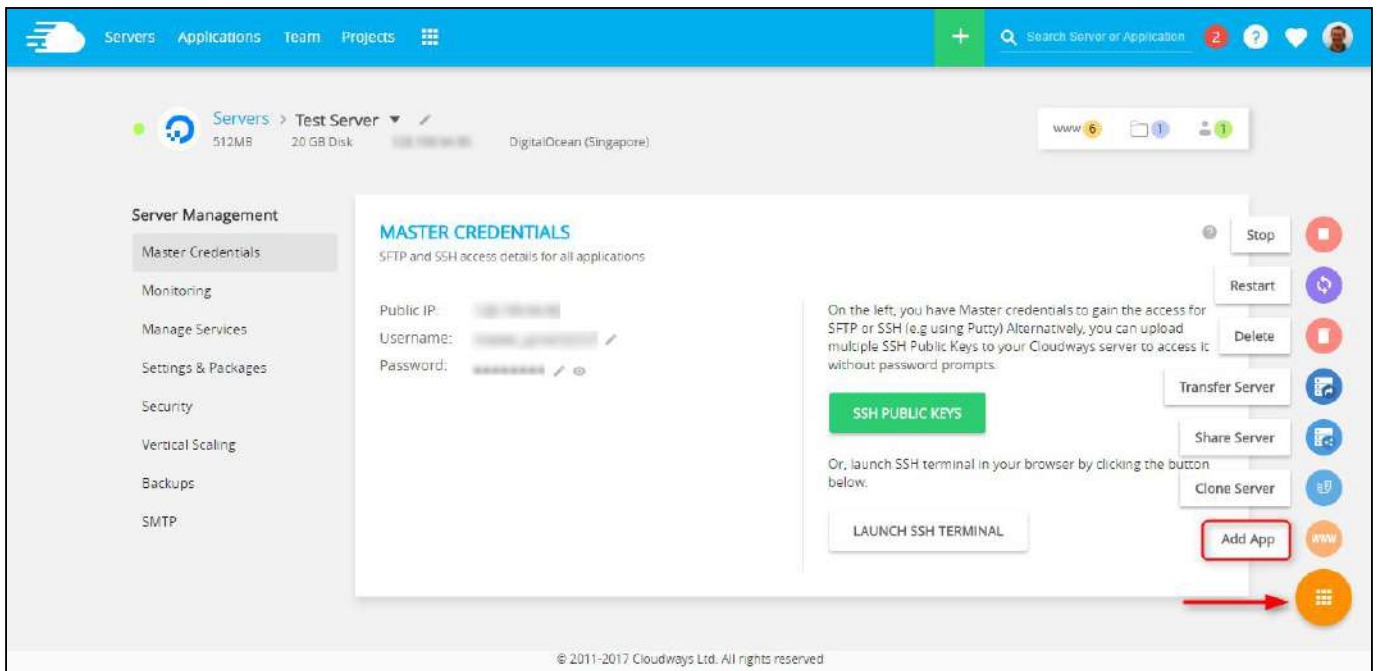

- How to launch a new application on an existing server.

Step 1: Select Server

Log into Platform with your credentials. Click on **Servers** in the top menu bar and then select the desired server you want to install the new application on.

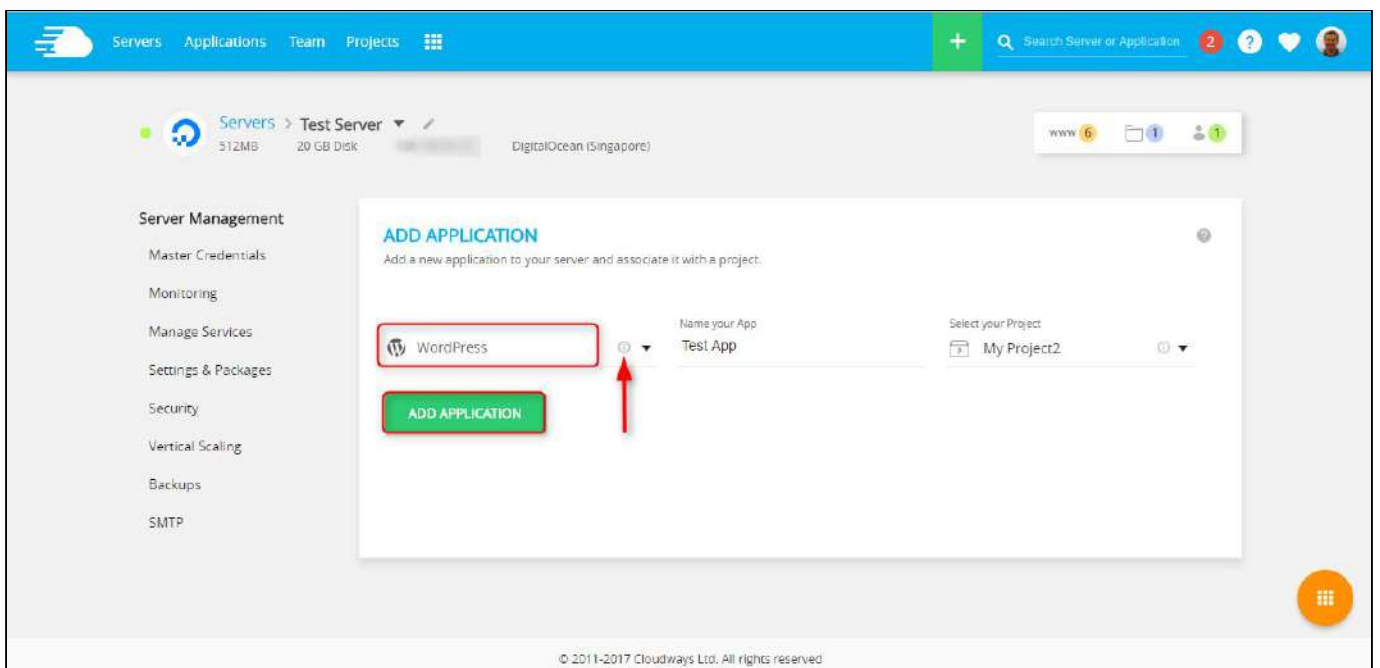

Now, click on the **circular grid icon** located on the bottom right corner of the screen and then select **Add App**.

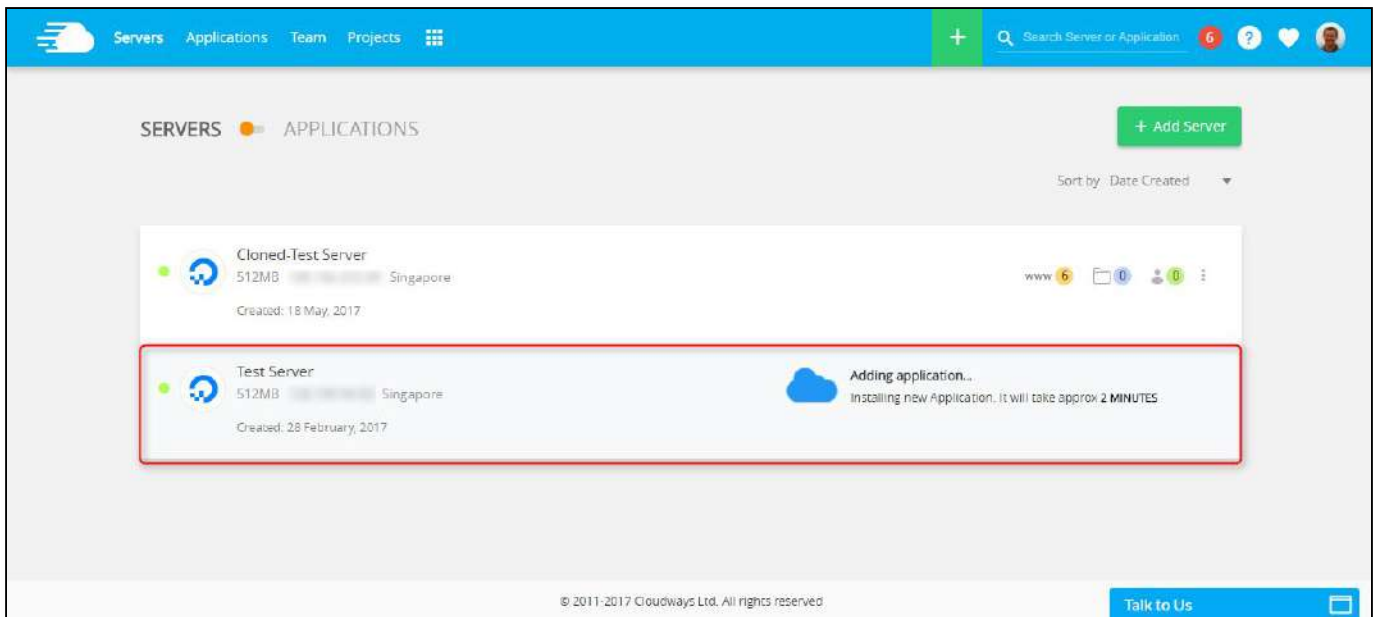

Step 2: Installing the Application

Select your desired application from the drop-down list and then click on the **Add Application** button.

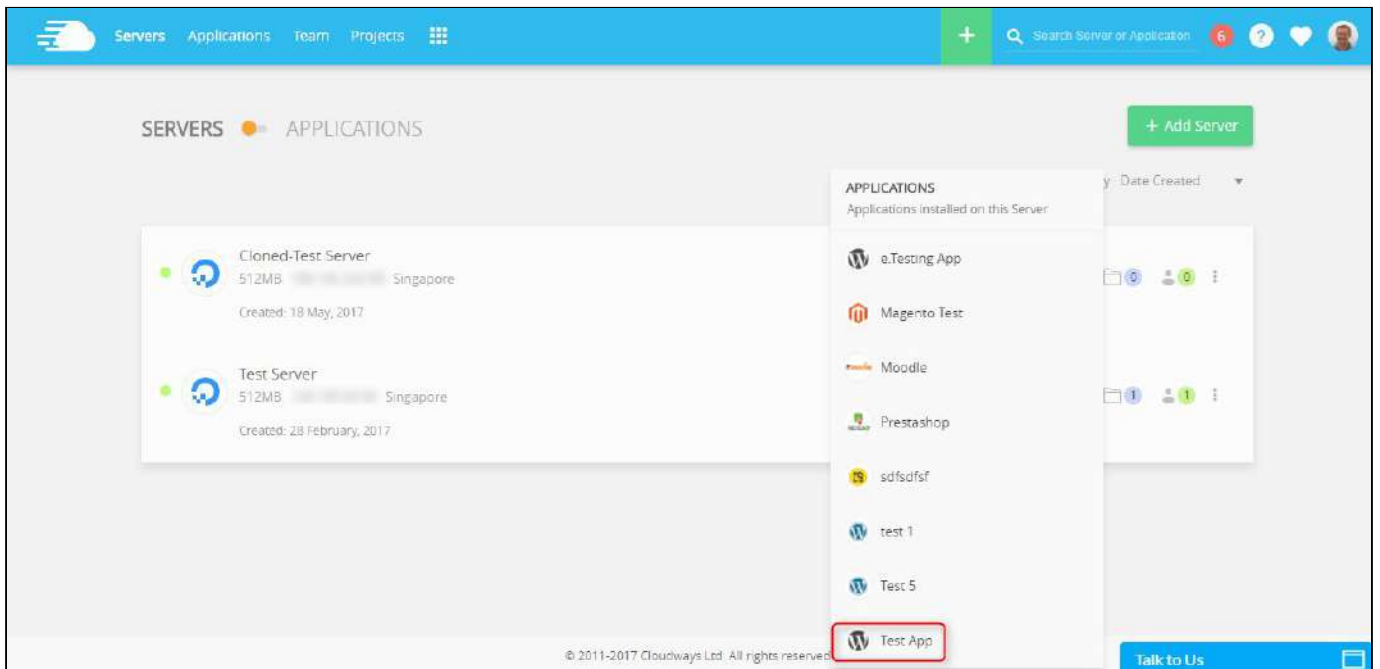

The installation now begins. Your high-speed application will be ready in a few minutes.

Step 3: Application Installation Completed

You can view your **new application** on the server by clicking the **www** button on the server.

That's it. You have learned how to add a new application to an existing server.
